Corporate Overview

Red Tail Corporation offers only the best training, equipment and support to Military, Law Enforcement and Commercial agencies. Our expertise and experience in the Special Operations field enables us to provide the most resourceful and directed information to our customers.

Red Tail Corporation was founded in March 2005 by former Special Operations Forces personnel with the goal to provide only the highest caliber training, equipment and support to the ever-changing needs of each customer. Our mission is to build a solid foundation comprised of knowledge, experience and customer service. We feel that the services currently available to our Armed Forces, Government, and Law Enforcement are limited in many of the important aspects of this field. While it is our goal to exceed in every aspect, the key element that sets us apart from the others is that our team consists of former operators with field experience and it is our mandate to build each service according to our customers needs. Utilizing the knowledge from our team in conjunction with the most advanced technology, we have created a powerful resource for our Government Agencies.

SIN 874-4 - Instructor Led Training

Our training programs are designed to provide a complete learning experience. We believe that it is essential for students to comprehend both the formal education provided in the classroom, as well as the interactive training gained by working with the equipment. Only by implementing this unified method of teaching are students able to fully grasp the sophisticated technological concepts covered.

The instructors at Red Tail Corporation are highly specialized in all aspects of their respective fields. Advanced training, combined with hands-on field experience and an evaluation of customer needs, enables us to produce realistic and practical training exercises. Our curriculums have been structured to provide the most effective information, while maintaining the flexibility to adapt to the students' level of experience.

The equipment used during our training courses is the very equipment that will be used in the field. The benefit provided by this aspect alone is invaluable. This level of equipment tends to have highly sensitive calibration levels, special operational tools, complicated compatibility configurations, etc. By training with their own equipment, the students will not only grasp a good understanding of these aspects, they will acquire skills and gain experience in actual problem solving scenarios, as well as tips to abate them.

Courses Available on GSA Advantage

RTC-APPLE - Apple Essentials Course of Instruction

This 2-week, hands on course covers the Mac essentials, security, programming and networking of an Apple computer. This course is geared more toward students using a Mac for operational purposes. The whole course will be hands on, providing one week online, and the other week in a classroom setting. Each student will learn how to run all standard programs on a Mac, network a personal computer with others, properly secure their computer, operate Parallels software, as well as learn how to use a MacBook as an operational tool.

COST PER COURSE: \$15,113.00

Student Min: None

Student Max: 16

Length: 10 days

RTC-BAV1 - Basic Audio/Video Surveillance Course

This 1-week, hands on course covers basic electronic theory, methods of surveillance, as well as close, medium and long range audio/video surveillance techniques. This is a great course for students with limited A/V surveillance background or for students who need a review. Each student will be able to plan an A/V surveillance operation, build and design A/V surveillance devices, install, monitor and support A/V surveillance operations as well as make environmental assessments for these operations.

COST PER COURSE: \$10,075

Student Min: None

Student Max: 16

Length: 5 days

RTC-TRAK - Tracker Training Course

This 3-day, hands on course covers all aspects of tracking. This course entails planning and operational considerations for using technical tracking capabilities. It will cover practical knowledge of installing, monitoring and supporting various types of technical training devices, and tracking communication networks. Each student will be able to identify the correct tracking device according to the mission, plan for and successfully complete the installation, monitoring and support of tracking operations.

COST PER COURSE: \$4,877.00

Student Min: None

Student Max: 16

Length: 3 days

RTC-DROP - Digital Remote Observation Post Course

This 2-day, hands on course covers the basic concepts and fundamentals of DROP. It will also cover, programming, setup, assessment, planning and supporting the DROP system. Each student will be able to assess the environment for remote operations, program and setup a system, provide planning and support to DROP operators and troubleshoot the remote observation post and communications that are associated.

COST PER COURSE: \$2,838.00

Student Min: None

Student Max: 16

Length: 2 days

RTC-TSR - TSR Basic Course

This 6-week course includes both instructor led training as well as practical exercises. This course will enable surveillance specialists to perform necessary duties with technical surveillance, and reconnaissance equipment to the prescribed level under duress. Using documented procedures and applicable safety methods this course will instruct support personnel to execute and oversee CTR, TTL, SOTVS, basic and advanced surveillance operations. Each student will be able to properly maintain and utilize reconnaissance and technical surveillance equipment. They will also be able to build, solder, troubleshoot and fix all related TSR equipment through the use of tools and knowledge gained from the

course, as well as conduct basic troubleshooting of all related TSR equipment.

COST PER COURSE: \$262,074.00

Student Min: None

Student Max: 16

Length: 30 days

RTC-TSO - TSO Refresher Course

This 1-week course will enable TSO operators to broaden their knowledge of TSO systems and inventory as well as to build practical and applicable knowledge and skills. Each student will learn to review safety and security of surveillance and counter surveillance SOF style. They will learn all ranges and techniques of surveillance as well as how to operate a variety of tracking devices through live practicals. This course will also cover electronic theory and concerns in depth, power conversions, soldering, budgeting of power sources, power supplies, installs, camera mounts, A/V and CTR operations. Through the practical section of this course each student will learn troubleshooting as well as become an expert on the TSO kits.

COST PER COURSE: \$15,073.00

Student Min: None

Student Max: 16

Length: 5 days
